The following pages contain the recommended startup parts to support an initial placement of the models above. This is not a compilation of all parts that will be needed; it is a suggested list of parts and supplies that could adversely affect machine operation if they are not replaced at the scheduled intervals.

Consult the current parts catalogs and bulletins for additional parts and changes that may be made from time to time.

Use this list as an aid in preparing an initial parts inventory for these models. Parts and supplies can be ordered using standard ordering procedures.

1. Replacement interval based on actual durable life counter value.
2. Supply item. Replacement intervals are approximate, based upon copy/print characteristics.
3. Waste toner full condition is detected by the actual waste toner level.
